DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: page 20, line 24, "diode-or'd" should correctly be --diode-OR'd I--.

Correction of the following is required: the specific *impedance values* disclosed in claims 31, 32, 68 and 69 need to be disclosed in the specification.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 21, 22, 58, 59 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear which "combining circuit is a pair of diodes", since the "combining circuit" as stated in claim 21/58 appears to be summer (368) of Figure 4 and not a pair of diodes (360a and 360b) claimed.

Allowable Subject Matter

Claims 1-20, 22-57, 60-98 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claims 1-20, 22-57, 60-98 are allowed over the prior art because none of the prior art disclosed or suggested showing the particular structure and/or operation recited in these claims namely:

Claims 1-20, 23-57, 60-98 call for, among other, an apparatus and method of a power amplifier comprising: an input signal compensation block (205); a power signal

Art Unit: 2817

compensation block (235); a summer (237); a control circuit (216) having the connection and functions as claimed.

Claim 21, 22, 58, 59 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional reference (Takita (5,990,751); Carver (6,166,605); Lewyn (6,236,273)) shows further analogous prior art circuitry (having positive and negative power supplies).

This art is deemed relevant and should be carefully reviews before any amendment is filed.
